Splice Products & Services

IP Transit

Internet Solutions

Our core focus...

- Multiple tier 1 carrier options
- Custom designed network solutions
- Route and carrier diversity for business recovery solutions
- High value combining quality with competitive, low cost services

Local Access

Local Loop & Metro Private Lines

Multiple carrier options for local loops

- Currently serving thousands of on-net buildings across the U.S.
- Providing competitive access solutions for customers in hard-to-reach locations
- Extensive Reach means faster implementation timeframes, lower costs, reduced points of failure

In today's internet economy, 'Local Access' remains a challenging & expensive component in connecting the enterprise to the internet. Options for local loops seem limited and costs are high. Splice currently has access to thousands of on-net local buildings across the U.S. Our on-net footprint enables competitive access for customers in hard to reach locations. This means faster implementation timeframes, significantly lower costs, and reduced points of failure.

Internet applications are a driving force in today's high tech economy. Networks require high bandwidth capacity to ensure quick response times for e-commerce, website access, and many other data communication applications. Splice will custom design a highly reliable, multi-carrier, competitive network that will enable your data to fly.
